Publication and Update

Last day of May and November

Journal Aims

The International Journal of IT-based Public Health Management (IJIPHM) is a multidisciplinary peer reviewed journal, mainly publishes original research and applied papers on public health management using technology in order for the public to prevent diseases and injuries. An art of preventing disease and promoting healthy lifestyle for the benefit of the public. This includes the application of science and engineering, mathematics and statistics, computer and information, mechanics and physics, operation research and management, modelling and simulation, electric and machine engineering.
To bridge the gap of users who do not have access to major databases where one should pay for every downloaded article; this online publication platform is open to all readers as part of our commitment to global scientific society.

Journal Topics

The main topics include but will not be limited to: (Excellent surveying works, summary or introduction of new or fresh idea in these areas are welcome, too).

- Application of Computer and Information for Disease Epidemiology
- Environmental and Occupational Health Technology
- Mechanics and Physics for Environmental Health
