Publication and Update

Last day of June and December

Aim and Scope

The International Journal of Reliable Information and Assurance (IJRIA) aims to provide an attractive paper on the feasible approach for the information security in the large-scale collaboration environments. This journal places particular emphasis on understanding how to design and build the secure architecture from the targeted researchers, academicians, software engineers, and field experts. This journal presents Information Assurance which suggests the case studying, issue learned, and constructing a trust based on information system with particular attention to integrated and interdisciplinary aspects.

The journal also applies strict ethical standards of academic research, and all submitted articles should meet the requirements for review, editing, and formatting for publication as needed.

To bridge the gap of users who do not have access to major databases where one should pay for every downloaded article; this online publication platform is open to all readers as part of our commitment to global scientific society.

Journal Topics

The main topics include but will not be limited to: (Excellent surveying works, summary or introduction of new or fresh idea in these areas are welcome, too).

- **System Security:** intrusion detection, secure end systems, secure operating

- systems, database security, security infrastructures, software security, evaluation
- **Network Security:** Internet security, firewalls, mobile security, security agents, protocols, intrusion detection and prevention, social network security, anti-virus and anti-hacker measures
- **Content Protection:** software protection, tamper resistant software; applications, electronic commerce, government, health, telecommunications, mobility
- **Cryptography:** symmetric and public key algorithms, cryptanalysis, digital signature, cryptographic protocols, privacy, access control, authentication, identification, hash function, information hiding
- **Cryptographic Engineering:** cryptographic engineering for public-key and secret-key algorithms. cryptographic algorithms for embedded systems
- **Mobile Security**
- **e-Business Security**
- **Privacy Protection Technology**
- **Privacy related Law, Ethics, and Regulation**
- **Security related Law, Policy, Ethics, and Regulation**
- **Security Modeling / Architecture**

Advisory/Editorial Board

- Chang Xu, Director of Operations at Sunshine Library Rural Digital Education Initiative, China
- Chung Huang Yang, National Kaohsiung Normal University, Taiwan
- David Lie, University of Toronto, Canada
- David Naccache, Pantheon-Assas II University, France
- Di Ma, University of Michigan-Dearborn, USA
- Hongjun Wu, Nanyang Technological University, Singapore
- Ioannis Angeli, Cyprus University of Technology, Cyprus
- Jianying Zhou, Institute for Infocomm Research, Singapore
- Jianyoung Chen, Shenzhen University, China
- Josef Pieprzyk, Macquarie University, Australia
- Kaoru Kurosawa, Ibaraki University, Japan
- Kazuo Ohta, University of Electro-communications, Japan
- Keith Martin, University of London, UK
- Kouichi Sakurai, Kyushu University, Japan
- Masahiro Mambo, Kanazawa University, Japan
- Nitesh Saxena, University of Alabama at Birmingham, USA
- Qianhong Wu, Villanova University, China
- Robert H. Deng, Singapore Management University, China
- Sung-Ming Yen, National Central University, Taiwan
- Tsuyoshi Takagi, Kyushu University, Japan
- Vincent Rijmen, Katholieke Universiteit Leuven, Belgium

Editorial Secretary

- Lyn Ruiz Curio
- Haiying Wang
- Yuyu Yin
